

# Forming barium stars through stable RLOF mass transfer from TPAGB-stars

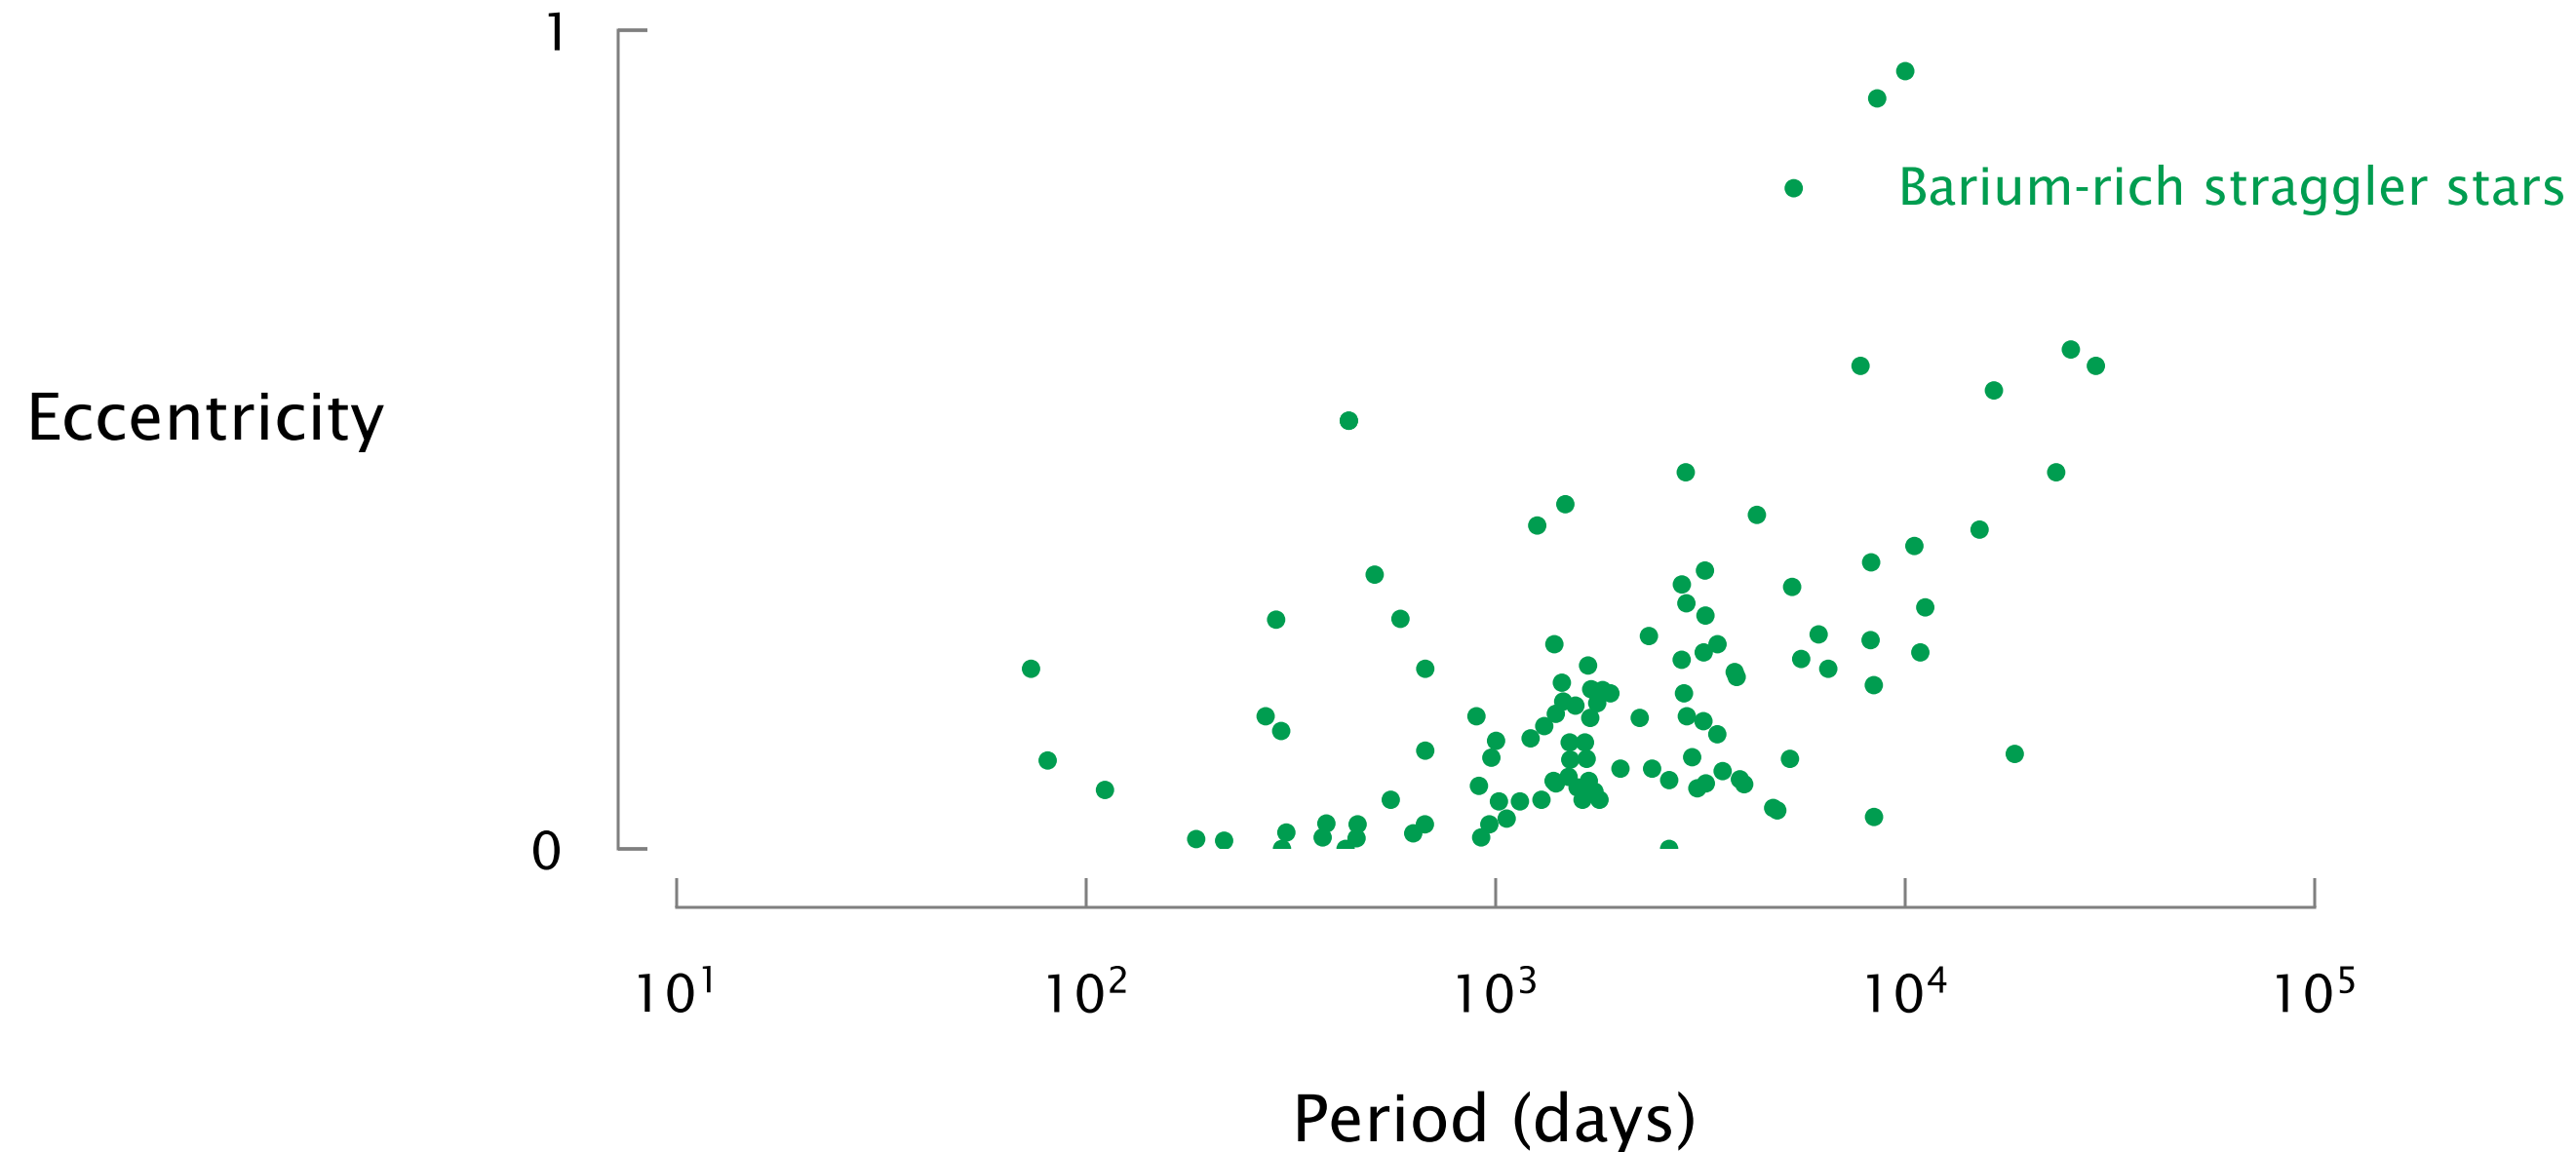

Koen Essers

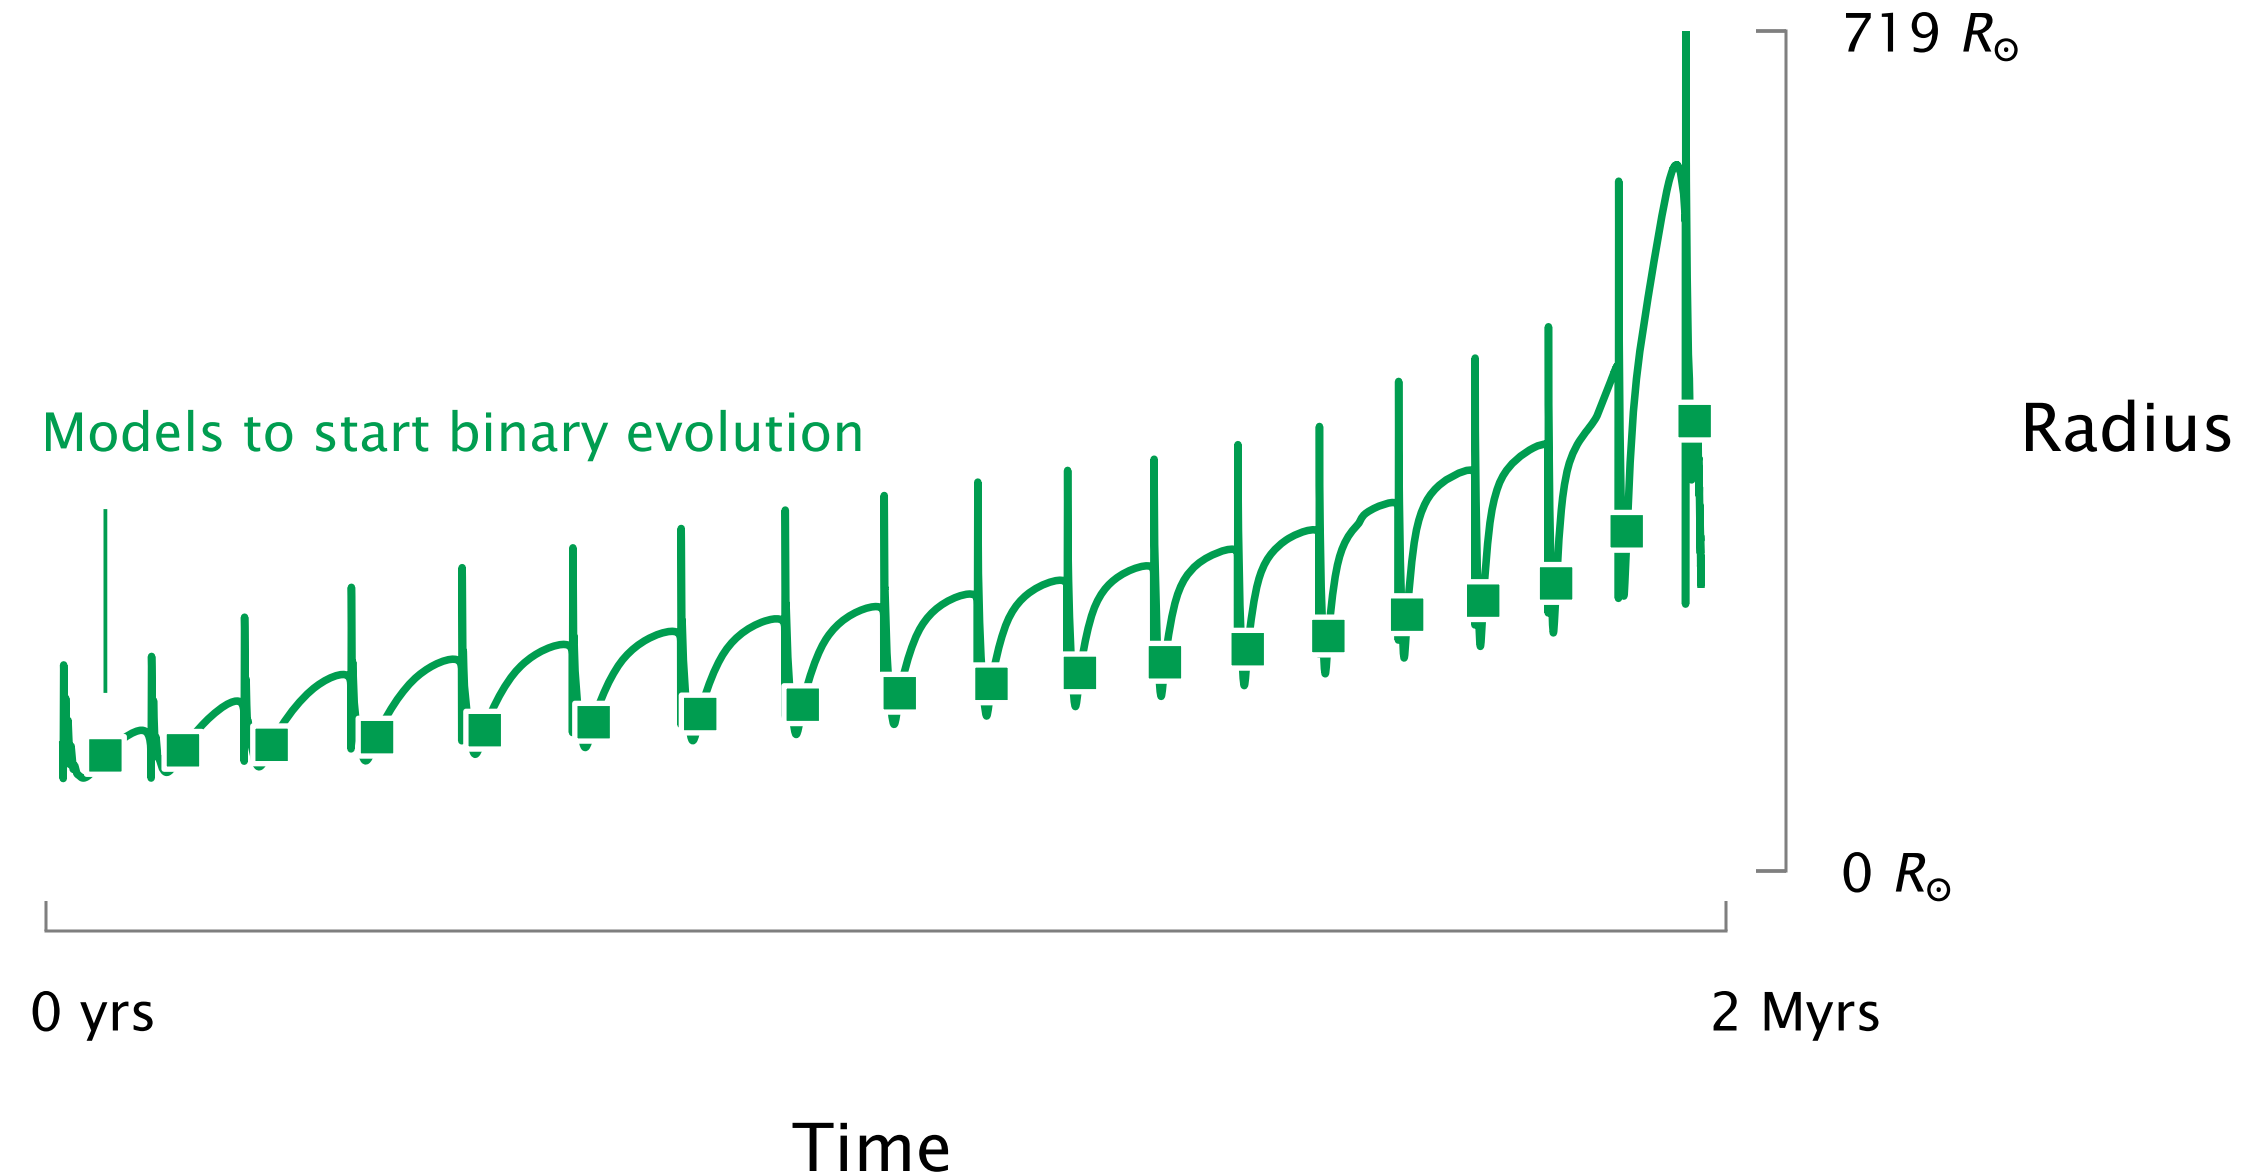

Radboud University

10<sup>th</sup> of June 2026

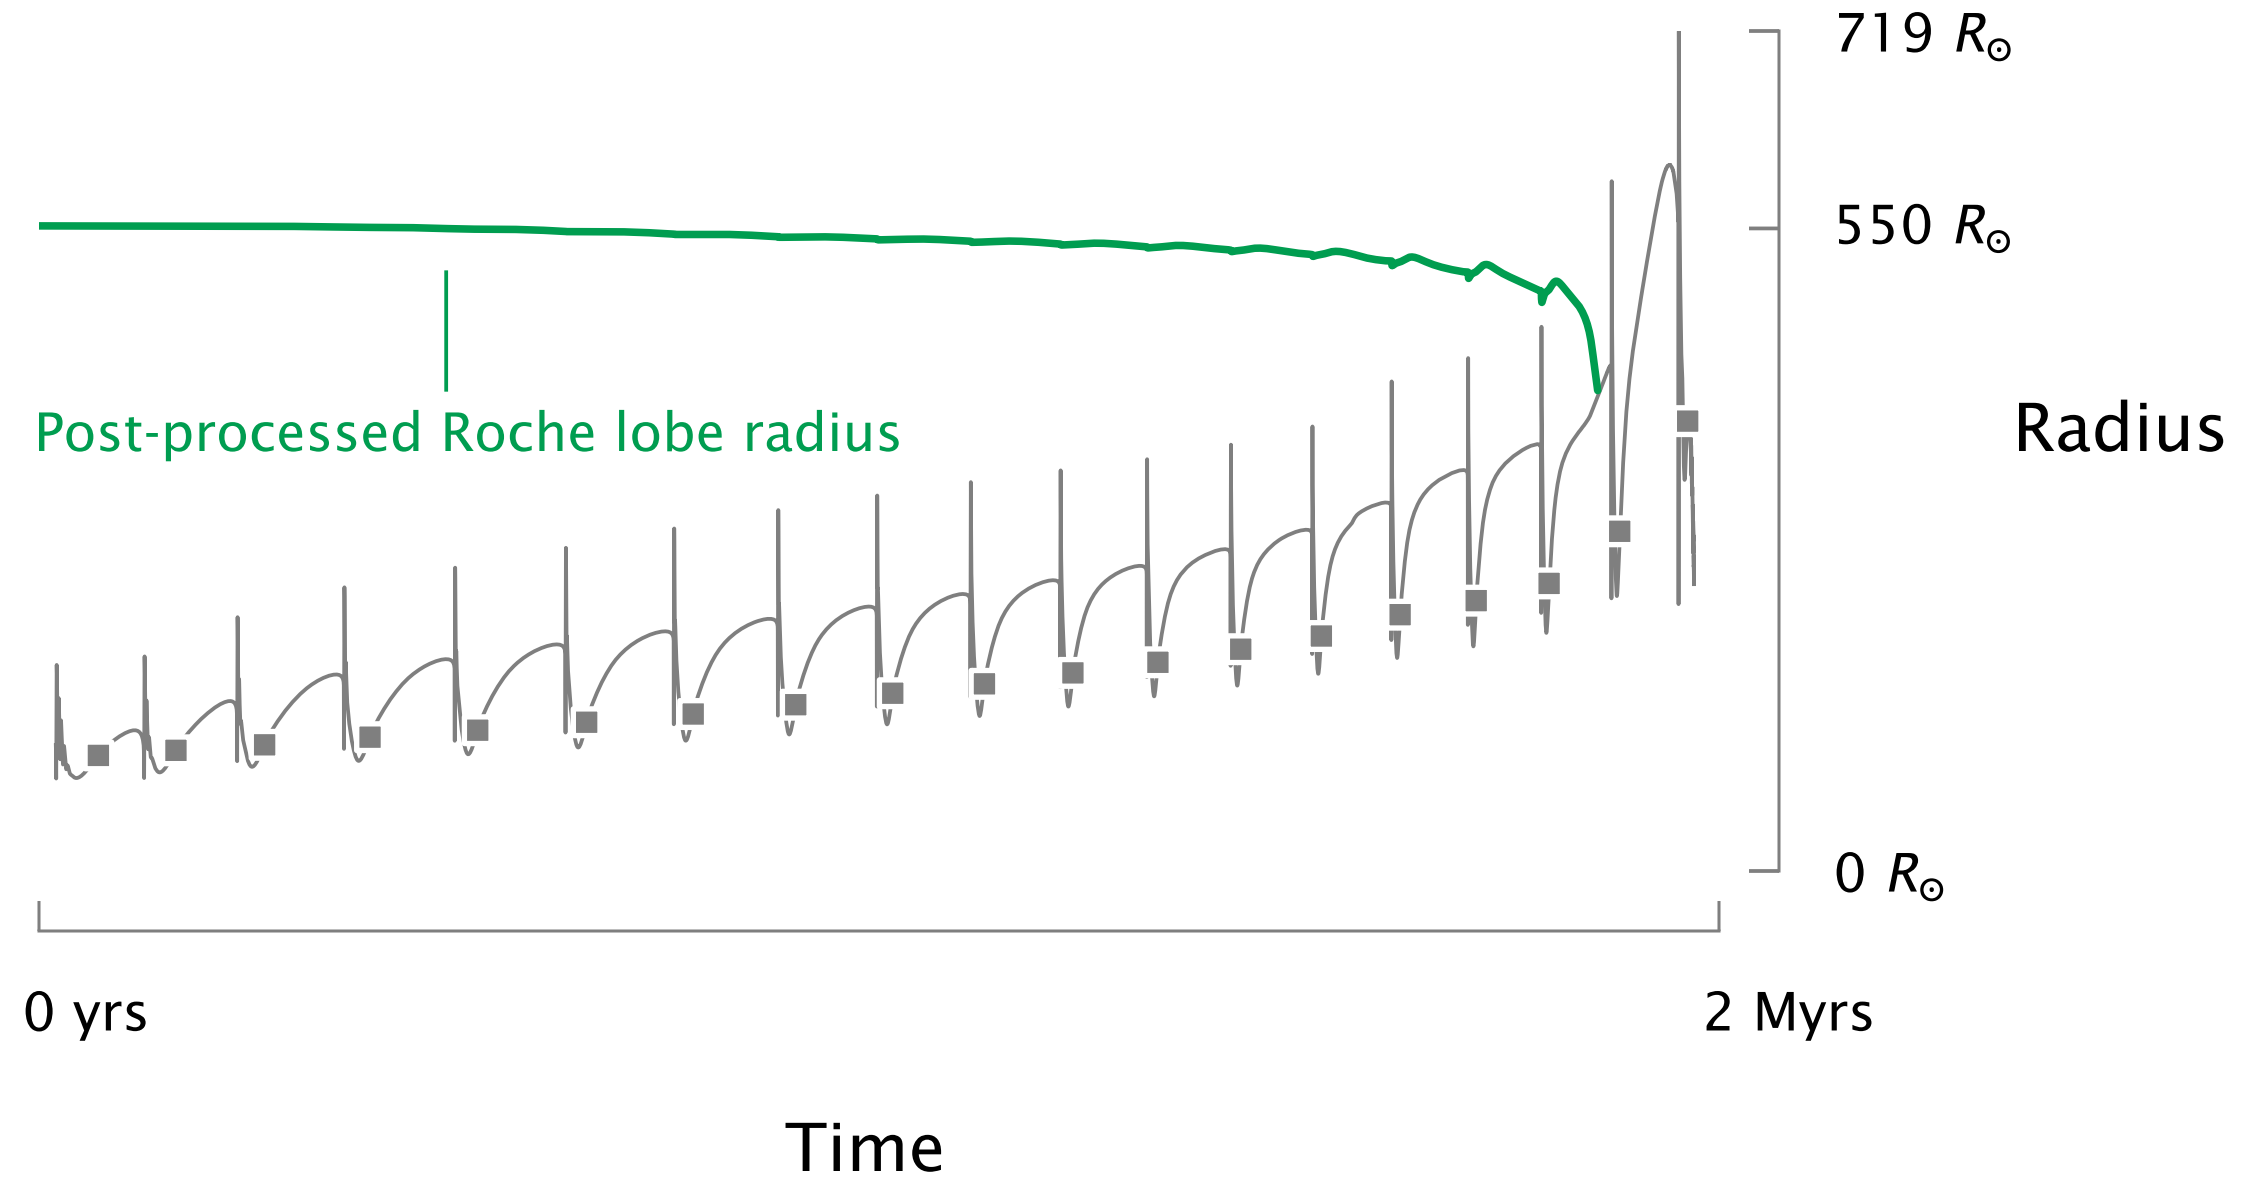

# Ba stars have periods incompatible with wind mass transfer or common envelopes

I simulate detailed TP-AGB stars with *MESA*  
and I save models to use as binary input

I estimate the binary evolution using single star models and a post-processing step

I determine a *MESA* starting model and  
infer the rotation, separation and mass-ratio
